About the Fund

The Accelerate Private Equity Alpha Fund (TSX: ALFA) is designed to provide investors with private equity-like investment returns through a diversified long-short portfolio of equity and derivative securities.

Investment Objectives

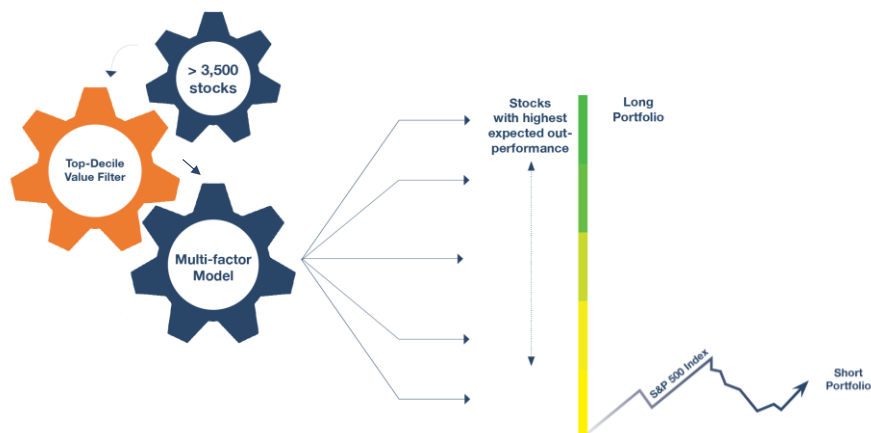

- Replicate private equity returns
- Target 12% - 18% annualized returns
- Hold leveraged long positions
- Hedge leveraged portion of portfolio
- Provide uncorrelated returns

Investment Process

ALFA utilizes a two-step systematic, propriety multi-factor model to sort and rank all liquid North American stocks based on typical private equity leveraged buyout characteristics. First, ALFA filters all liquid North American stocks based on valuation, liquidity and size, and chooses a basket of top-decile value stocks.

Then, ALFA ranks these top-decile, small and mid-cap value stocks based on four principal factors:

- Debt Paydown
- Return on Capital
- Gross Profit/ Assets
- Change in Total Assets

The Fund goes long a leveraged portfolio of the highest expected return stocks selected from the multi-factor model while hedging the leveraged portion of the long portfolio by going short a broad U.S. equities index. The portfolio is rebalanced on a monthly basis.

Fund Characteristics
