

# BUY BITCOIN, SAVE THE PLANET

## WHAT MAKES ABTC ECO-FRIENDLY?

Bitcoin miners are expected to consume roughly 130 Terawatt-hours of energy (TWh), which is approximately 0.6% of the global electricity consumption. ABTC is green for four reasons:

### 1. Futures-based

Accelerate trades bitcoin futures, which consumes a fraction of the energy of mining bitcoin. Each bitcoin bought through futures is one that doesn't need to be mined.

### 2. Decarbonization initiative

We have a tree-planting campaign to neutralize carbon emissions and help fight climate change.

Up to 10% of our management fee will be allocated to our annual tree-planting campaign.

### 3. Independently verified

We work closely with a third-party sustainability consultant, helping us efficiently track energy use and emissions, allowing us and our investors to achieve a sustainable investing experience.

### 4. Professionally managed

We use a tree-planting management platform that enables us to monitor projects effectively. It is designed specifically to manage large-scale projects, allowing us to provide data to clients regarding the status of their sustainability efforts.

## TECHNOLOGY

# veritree

We are strategically partnered with veritree, the world's first fully integrated platform designed to transform the restoration space through technology, which relies on accurate monitoring and ongoing stewardship to ensure projects are performing exactly as intended. With this technology, there is:

### No Double Counting

### Additionality

### Permanence

### Transparency

## HOW CAN ABTC BENEFIT YOU?

Diversify your investment portfolio

Help fight climate change
