### About the Fund

The Accelerate Enhanced Canadian Benchmark Alternative Fund (TSX: ATSX) provides combined exposure to the S&P/ TSX 60 plus a long-short Canadian equity overlay portfolio designed to add outperformance above the broad Canadian equity index.

### Investment Objectives

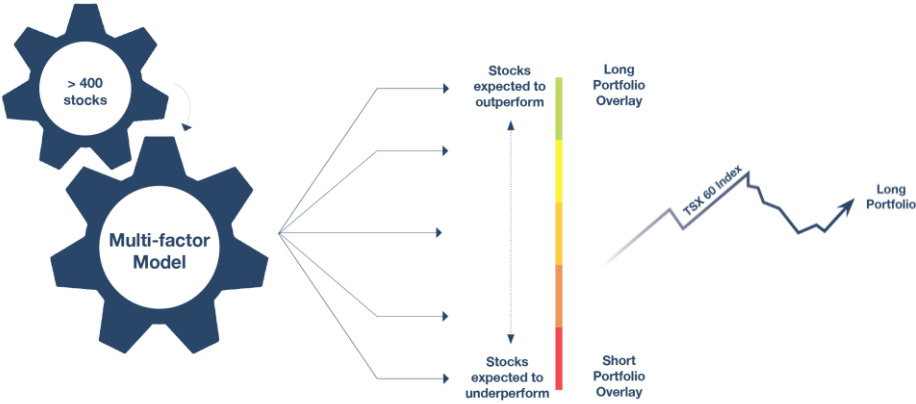

- Outperform the broad Canadian equity index
- Provide volatility in-line with the broad Canadian equity index

### Investment Process

In addition to providing exposure to the broad Canadian equity index, either through derivatives, ETFs or the underlying equities, ATSX holds a diversified, long-short equity overlay portfolio of Canadian equities.

To select the long-short overlay portfolio, ATSX utilizes a systematic, propriety multi-factor model to sort and rank all liquid Canadian stocks based on five principal factors:

- Value
- Quality
- Price Momentum
- Operating Momentum
- Trend

The Fund goes long a portfolio of the highest expected return stocks selected from the top decile ranking from the multi-factor model while going short a portfolio of the lowest expected return stocks selected from the bottom decile ranking. The portfolio is rebalanced on a monthly basis. The long portfolio is up to 50% of NAV and the short portfolio is up to -50% of NAV.
